Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: Applicants have claimed an aqueous effervescent liquid detergent composition for use in fabric washing which upon contact with wash liquor provides effervescent action, and which comprises from 10 to 50% of a surfactant, from 1 to 35% of a builder selected from the group consisting of water soluble alkali metal phosphates, polyphosphates, borates, silicates, carbonates; polycarboxylates; water-soluble salts of phytic acid; water-soluble polyphosphonates; water-soluble salts of mellitic acid; carboxymethyloxysuccinic acid, salts of polymers of itaconic acid and maleic acid, tartrate monsuccinate, and tartrate disuccinate; amorphous and crystalline zeolites or aluminosilicates, and a dissolved gas in a sufficient amount to provide the effervescent action, wherein the dissolved gas is an inorganic gas selected from the group consisting of nitrogen, oxygen, carbon dioxide, oxides of nitrogen and noble gases and is present in the composition at a concentration of from 0.001 to 5% by weight and having a higher solubility in an aqueous surfactant-containing composition than in water, wherein said composition is maintained in a non-pressurized container. The closest prior art is drawn to self-foaming compositions, i.e. personal cleansing and shaving compositions. Such compositions, however, do not contain significant amounts of detergent builders. It would not have been obvious to one of ordinary skill in the art to add a builder to the cited prior art compositions to satisfy the present claim set forth above. Accordingly, the present claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
